PROJECTS / OPEN-SOURCE

BIRDLE (A TWITTER CLONE) | [LINK](#)

PHP, Vue.js, Laravel, MySQL

Birdle is a Twitter clone that is build with Laravel and Vue.

UDEMY COURSE SUGGESTION ENGINE | [LINK](#)

Python, Flask, SkLearn, Pandas

A recommendation engine based on clustering and sentimental analysis of Udemey courses.

PLAYIFY (A SPOTIFY CLONE) | [LINK](#)

PHP, Javascript, MySQL, JQuery

Playify is a basic Spotify Clone built with PHP and pure Javascript without an admin dashboard.

SOCIAL NETWORK (A FACEBOOK CLONE) | [LINK](#)

Javascript, Python, Django, SQLite

Social Network is a basic Facebook clone built with Django.

DEVELOPMENT OF A WEARABLE RESPIRATION MONITORING SYSTEM
Flutter, Dart, Arduino, C

Electric & Electronics,

Diagnosis of diseases affecting the respiratory system and the surrounding muscular system is important for human health. These types of diseases may show various symptoms as well as they may not. Some symptoms may be noticed by the patient, while others may not be noticed. In this project, we have examined whether some diseases can be diagnosed before some strong symptoms appear and whether a person's health could be determined by the collected data by making a wearable device that measures muscle activities in the respiratory system with multiple sensors.
